## CS6290/CS4290 — High-Performance Computer Architecture Fall 2000

---

CS6290/CS4290 Handout #1  
Introduction and Syllabus

---

Issued: August 21, 2000 (*revised August 25*)

- Instructor:** Prof. Ken Mackenzie `kenmac@cc.gatech.edu`  
Office: CoC 219, x4-1704 WTh4-5.  
Assistant: Yolanda Harris, CoC 264, x5-1353
- TA:** Pat Prasangsit `pp@cc.gatech.edu`  
Office: (CoC common area) time TBA
- Web:** [http://www.cc.gatech.edu/classes/AY2000/cs6290\\_fall/](http://www.cc.gatech.edu/classes/AY2000/cs6290_fall/)
- Lecture:** MWF3-4 in CoC 101 (Fridays are generally discussion)
- Text:** Hennessy and Patterson, Computer Architecture: A Quantitative Approach, Morgan Kaufman, 1995 (Second Edition), along with papers to be distributed in class to fuel discussions.
- Description:** This course serves as graduate-level (or advanced undergraduate) introduction to computer architecture. In this course, you will learn about the design and evaluation of computers, particularly advanced (internally parallel) uniprocessors and memory systems.
- Topics:** Memory systems: naming, protection, caching.  
Implicitly-parallel architectures:  
    Out-of-order execution, dataflow, speculation.  
Vector processing.  
Interconnects (for parallel processing or for I/O)  
Explicitly parallel architectures  
Emerging hybrid architectures.
- Prerequisites:** You should be familiar with computer organization at the level of CS2200 or (old) CS3760/CmpE3510. CS students cannot receive credit for both CS4290 and CS6290 because the material is the same. Also, ECE6100 is substantially the same course.
- Assignments:** 8 homeworks  
2 design projects  
1 in-class midterm, 1 final

**Grading:** 20% Homeworks (divided evenly, lowest one dropped)  
 40% Projects (20/20%)  
 40% Exams (15% midterm plus 25% final)  
*CS6290 and CS4290 will be graded independently.*

### Tentative Calendar

<i>(Aug)</i>	<b>21</b> <i>first class</i>	<b>23</b>	<b>25</b> Homework 0 due
	<b>28</b>	<b>30</b>	<b>1</b> Homework 1 due
<i>(Sep)</i>	<b>4</b> <i>holiday</i>	<b>6</b>	<b>8</b> Homework 2 due
	<b>11</b>	<b>13</b>	<b>15</b>
	<b>18</b>	<b>20</b>	<b>22</b> Project 1 due
<i>(Oct)</i>	<b>25</b>	<b>27</b>	<b>29</b> Homework 3 due
	<b>2</b>	<b>4</b>	<b>6</b> Homework 4 due
	<b>9</b>	<b>11</b>	<b>13</b> Homework 5 due
	<b>16</b>	<b>18</b>	<b>20</b> <i>midterm</i>
	<b>23</b> <i>holiday</i>	<b>25</b>	<b>27</b>
	<b>30</b>	<b>1</b>	<b>3</b> Project 2 due
<i>(Nov)</i>	<b>6</b>	<b>8</b>	<b>10</b> Homework 6 due
	<b>13</b>	<b>15</b>	<b>17</b> Homework 7 due
	<b>20</b>	<b>22</b>	<b>24</b> <i>holiday</i>
<i>(Dec)</i>	<b>27</b>	<b>29</b>	<b>1</b> Homework 8 due
	<b>4</b>	<b>6</b>	<b>8</b> <i>last class</i>

### Homework and Projects

Some of the homework consists of design projects. These projects consist of paper system designs which are carefully justified using simulation measurements of benchmarks. The simulators and benchmarks are Sparc-based and written in C.

### Late Policy

Homeworks are due at the beginning of the class indicated. Late homework will not be accepted.

### Collaboration

Unless specifically indicated otherwise, collaboration on projects and homework in **pairs** is welcome and encouraged. If you work in a pair, turn in one write-up with the names of both collaborators. You are welcome to discuss high-level concepts with other groups, but all homework/project solutions must be worked out and written up separately.
