

CS4400 – Fall'03

Redefined Reports

Based on the revisions to the project description posted on 9/19, some of the original reports no longer make sense. Find below the redefined list of reports:

1. For the last month, the number of cars that were rented for more than 10 days grouped by car type and location.
2. For the last month, the number of customers that rented a car more than once, grouped by location.
3. For each location, which car type was the most rented and which car type was the least rented in the previous month.
4. Total completed sales for each car type, in each location in the previous month. Note: A sale is completed only *after* the customer has returned the rented car to the company.
5. List of cars currently available in each location.
