

PHASE 3 DEMO GUIDELINES

PREPARATION FOR BOTH HEAVY WEIGHT AND LIGHT WEIGHT:

- You must prepare a file with the name "data.sql" with this template (click [here](#) for an example) that contains all SQL statements PRIOR TO the demo. The SQL statements should allow us to DROP ALL VIEWS/TABLES, CREATE VIEWS/TABLES, INSERT data in order to populate or clean the database.

- Prior to the demo: populate the database according to the provided sample data. 5% of the grade will be deducted otherwise.

- For Lightweight Option: You must prepare another script file with the name "tasks.sql" with this template (click [here](#) for an example) that contains all SQL Statements to perform the tasks T5, T6, T9, T10, T11, T14. Derived attributes (except for the attribute "status", if any, to check the current status of a movie item) should be computed by using SQL statements.

- DEMO DURATION: 10 min.

Notes:

- Hard coding the program to perform the tasks below instead of generating the GUIs from the database is prohibited. F will be given in such cases.

- TA may ask you to perform additional tasks in addition to the tasks mentioned above (for light weight options).
