Name: ________________________________

Grading TA: __________________________

• INTEGRITY: By taking this exam, you pledge that this is your work and you have neither given nor received inappropriate help during the taking of this exam in compliance with the Academic Honor Code of Georgia Tech. Do NOT sign nor take this exam if you do not agree with the honor code.

• DEVICES: If your cell phone, pager, PDA, beeper, iPod, or similar item goes off during the exam, you will lose 10 points on this exam. Turn all such devices off and put them away now. You cannot have them on your desk.

• ACADEMIC MISCONDUCT: Academic misconduct will not be tolerated. You are to uphold the honor and integrity bestowed upon you by the Georgia Institute of Technology.
  
  – Keep your eyes on your own paper.
  – Do your best to prevent anyone else from seeing your work.
  – Do NOT communicate with anyone other than a proctor for ANY reason in ANY language in ANY manner.
  – Do NOT share ANYTHING during the exam. (This includes no sharing of pencils, paper, erasers).
  – Follow directions given by the proctor(s).
  – Stop all writing when told to stop. Failure to stop writing on this exam when told to do so is academic misconduct.
  – Do not use notes, books, calculators, etc during the exam.

• TIME: Don’t get bogged down by any one question. If you get stuck, move on to the next problem and come back once you have completed all of the other problems. This exam has 8 questions on 8 pages including the title page. Please check to make sure all pages are included. You will have 50 minutes to complete this exam.

I commit to uphold the ideals of honor and integrity by refusing to betray the trust bestowed upon me as a member of the Georgia Tech community. I have also read and understand the requirements outlined above.

Signature: ________________________________
1. (9 points)
   For each of the following vocabulary terms, write a concise 1-2 sentence definition. Be brief, and to the point.

   (a) [3 pts] immutable data type

   (b) [3 pts] expression

   (c) [3 pts] slice

2. (4 points)
   In two or three sentences, describe how the print function and return statement work in python. Be sure to list two differences between their behaviors.
3. (6 points)

For each of the following multiple choice questions, indicate the best answer by circling it.

(a) [1 pt] Given the following code, what is printed?

```python
if type("True") == bool or type(5 // 4) == float:
    print ("Braves")
elif type(5) == int:
    print("Falcons")
else:
    print("Hawks")
A. Braves
B. Falcons
C. Hawks
D. A and B
E. None of the above
```

(b) [1 pt] What is the value of newStr after the code below is executed?

```python
aStr = "abc"
anum="3"
newStr = aStr * len(anum)
```

A. ’abc3’
B. ’abcabc’
C. ’abc’
D. ’abcabcabc’
E. The code produces an error

(c) [1 pt] Assume the following code has been executed by the python interpreter:

```python
y = 1**1*1/(1//2)
```

What is the value stored in y?

A. 1.0  B. 1  C. 2.0  D. 0.5  E. The code raises an exception

(d) [2 pts] Assume the following code has been executed by the python interpreter:

```python
z = 4//2/2
```

What is the TYPE of the value stored in z?

A. Integer  B. Float  C. String  D. List  E. NoneType

What is the VALUE stored in z?

A. 1  B. 1.0  C. ’1’  D. ’1.0’  E. 4  F. 4.0  G. ’4’  H. ’4.0’

(e) [1 pt] What is the type of the data stored in X after this line of code is executed?

```python
X = print("2.0")
```

A. String  B. Int  C. Float  D. Bool  E. NoneType
4. *(5 points)*

Trace through the following piece of code as if you were the python interpreter.

```python
def carolSays(x):
    if x % 2 == 0:
        print('Hi!')
    if x % 3 == 0:
        print('My name is Carol!')

def lizSays():
    x = 8
    if x > 5:
        print('Nice to meet you!')
    elif x > 6:
        print('I don`t like you.')

    aNum = 1
    while aNum < 5:
        carolSays(aNum)
        aNum = aNum + 1

lizSays()
```

Write exactly what would be printed to the screen when the code is executed:
5. *(5 points)*

Trace through the following piece of code as if you were the python interpreter.

```python
someList = [1, 'Kanye', 'Fiddy', 0]
aList = [7, 0, 'Gucci', 'Weezy', 14]

def sortRappers(aList):
    someList = []
    for numRapper in aList:
        try:
            bank = numRapper / 2
            tempStr = 'I make {} billion trillion, son.'.format(bank*2)
        except:
            tempStr = 'Hello there, my name is {}. '.format(numRapper)

        someList.append(tempStr)
    return someList

partialResult = sortRappers(someList)
result = partialResult[2]
```

What does the result variable point at once the code has executed?
6. (10 points)
Read the following pieces of code. Write down exactly what would be printed as each for loop is executed:

```python
aString = "01234"
bString = "43210"
cString = "ABCDE"

(a) [2 pts]
    for c in aString[::-1]:
        print( cString[ int(bString[ int(c) ]) ], end="")

(b) [2 pts]
    for c in aString[::1]:
        print( cString[ int(bString[ int(c) ]) ], end="")

(c) [2 pts]
    for c in aString[1:4:2]:
        print( cString[ int(bString[ int(c) ]) ], end="")

(d) [2 pts]
    for c in aString[1:2:4]:
        print( cString[ int(bString[ int(c) ]) ], end="")

(e) [2 pts]
    for c in aString[4:2:-1]:
        print( cString[ int(bString[ int(c) ]) ], end="")
```
7. (5 points)

Examine the following code:

```python
aStr = "This is only a test!"
for char in aStr:
    print(char*2)
```

Now, pretend that the "f" key on your keyboard has failed, so that you can not use the "for" keyword. Re-write the code above using a while loop instead of a for loop. You must use a while loop, and may not use the "for" keyword.
8. *(9 points)*

Write a function named `filterNums` that takes in a list of items as a parameter. Your function should return a new list that has only the numbers (int/float) from the original list. Do not modify the original list.

**Example test case:**

```python
>>> a = [10, 20.0, True, "Hello", None, 3]
>>> x=filterNums(a)
>>> print(a)
[10, 20.0, True, "Hello", None, 3]
>>> print(x)
[10, 20.0, 3]
```
