SC07: From SC Online we learned that a new book was announced at SC07 this week called “Petascale Computing: Algorithms and Applications,” edited by David A. Bader.

“High-performance computing will enable breakthrough science and engineering in the 21st century,” said Bader. “My goal in developing this book was to inspire members of the high-performance computing community to solve computational grand challenges that will help our society, protect our environment, and improve our understanding in fundamental ways, all through the efficient use of petascale computing.”
