

# Multivariate Visual Representations 2

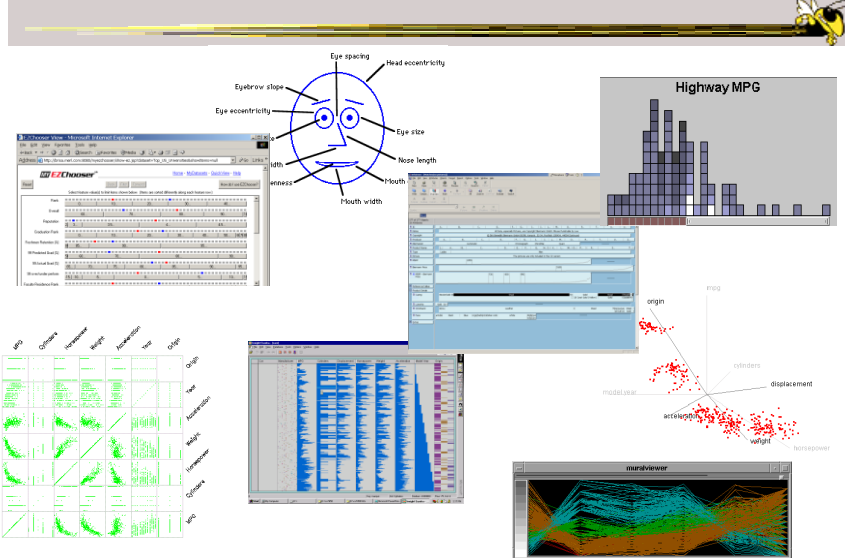

CS 7450 - Information Visualization  
Sep. 16, 2013  
John Stasko

## Recap

- We examined a number of techniques for projecting  $>2$  variables (modest number of dimensions) down onto the 2D plane
  - Scatterplot matrix
  - Table lens
  - Parallel coordinates
  - etc.

# Varieties of Techniques

Fall 2013

CS 7450

3

# Another Type of Data

- Temporal, with different types/categories taking on values at the various points in time

Fall 2013

CS 7450

4

# Baby Names

- We saw a demo back at the start of the term
- M. Wattenberg developed a visualization to help promote his wife's book on the topic
- Used 100+ years of US Census data on baby names
- Became an internet rage
  - 500,000 hits in first two weeks

Wattenberg & Kriss

Fall 2013

CS 7450

5

# The Visualization

- Shneiderman's mantra
- Dynamic Query Approach
- Keyboard-based mechanism for filtering
- Pop-up boxes for details
- Smooth animation on each transition

Stacked bargraph → StreamGraph

7

# Dust & Magnet

- Altogether different metaphor
- Data cases represented as small bits of iron dust
- Different attributes given physical manifestation as magnets
- Interact with objects to explore data

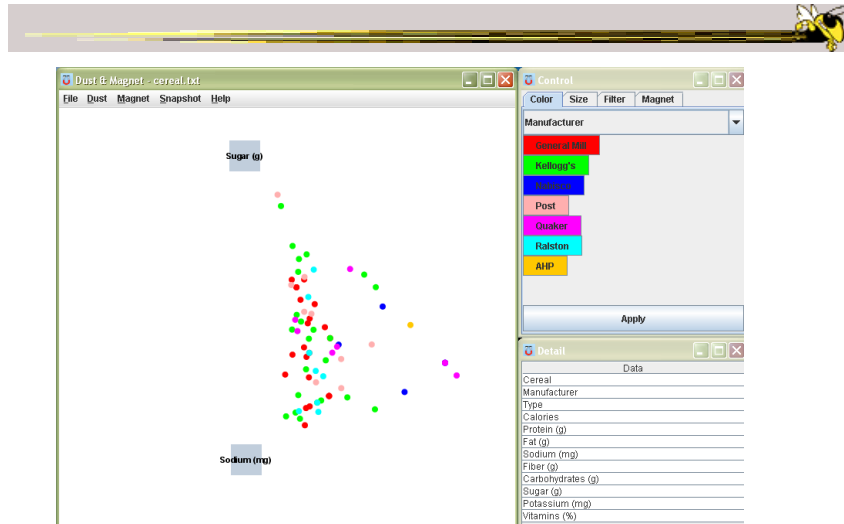

Yi, Melton, Stasko & Jacko  
*Information Visualization '05*

Fall 2013

CS 7450

8

# Interface

Fall 2013

CS 7450

9

# Interaction

- Iron bits (data) are drawn toward magnets (attributes) proportional to that data element's value in that attribute
  - Higher values attracted more strongly
- All magnets present on display affect position of all dust
- Individual power of magnets can be changed
- Dust's color and size can be connected to attributes as well

Fall 2013

CS 7450

10

# Interaction

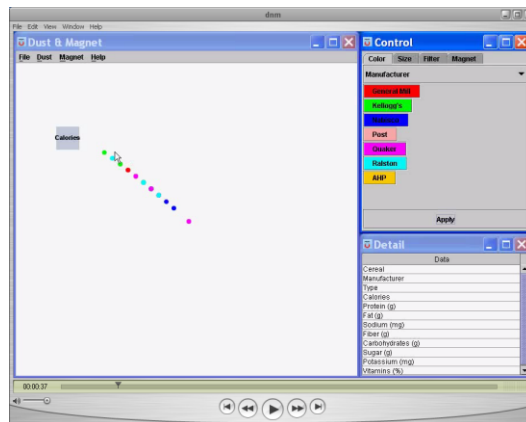

- Moving a magnet makes all the dust move
  - Also command for shaking dust
- Different strategies for how to position magnets in order to explore the data

Fall 2013

# Set Operations

- Different type of problem
  - Large set of items, each can be in one or more sets
  - How do we visually represent the set membership?

# Standard Technique

Venn  
Diagram

Contains all possible zones of overlap

# Alternately

Euler  
Diagram

Does not  
necessarily  
show all  
possible  
overlap zones

[http://en.wikipedia.org/wiki/File:British\\_Isles\\_Euler\\_diagram\\_15.svg](http://en.wikipedia.org/wiki/File:British_Isles_Euler_diagram_15.svg)

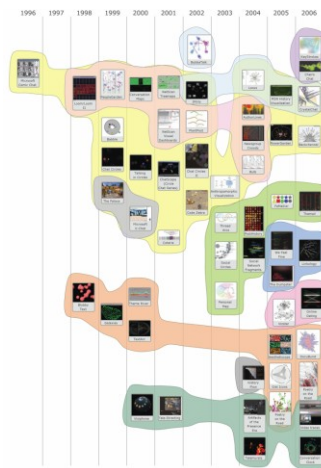

But what's the problem?

Fall 2013

CS 7450

17

# Step Back

- Most of the techniques we've examined work for a modest number of data cases or variables
  - What happens when you have lots and lots of data cases and/or variables?

Fall 2013

CS 7450

18

# Many Cases

Recall

Out5d dataset (5 dimensions, 16384 data items)

# Many Variables

Recall

# Strategies

- How are we going to deal with such big datasets with so many variables per case?
- Ideas?

# General Notion

- Data that is similar in most dimensions ought to be drawn together
  - Cluster at high dimensions
- Need to project the data down into the plane and give it some ultra-simplified representation
  
- Or perhaps only look at certain aspects of the data at any one time

# Mathematical Assistance 1

- There exist many techniques for clustering high-dimensional data with respect to all those dimensions
  - Affinity propagation
  - k-means
  - Expectation maximization
  - Hierarchical clustering

Fall 2013

CS 7450

23

# Mathematical Assistance 2

- There exist many techniques for projecting n-dimensions down to 2-D (dimensionality reduction)
  - Multi-dimensional scaling (MDS)
  - Principal component analysis
  - Linear discriminant analysis
  - Factor analysis

Comput Sci & Eng courses  
Visual Analytics, Prof. Lebanon

Data mining  
Knowledge discovery

Fall 2013

CS 7450

24

# Other Techniques

- Other techniques exist to manage scale
  - Sampling – We only include every so many data cases or variables
  - Aggregation – We combine many data cases or variables
  - Interaction (later)
    - Employ user interaction rather than special renderings to help manage scale

Fall 2013

CS 7450

25

# Our Focus

- Visual techniques
- Many are simply graphic transformations from N-D down to 2-D

Fall 2013

CS 7450

26

## Use?

- What kinds of questions/tasks would you want such techniques to address?
  - Clusters of similar data cases
  - Useless dimensions
  - Dimensions similar to each other
  - Outlier data cases
  - ...
- Think back to our “cognitive tasks” discussion

Fall 2013

CS 7450

27

## Now

- We’ll examine a number of other visual techniques intended for larger, higher-dimensional data sets

Fall 2013

CS 7450

28

## Can We Make a Taxonomy?

- D. Keim proposes a taxonomy of techniques
  - Standard 2D/3D display
    - Bar charts, scatterplots
  - Geometrically transformed display
    - Parallel coordinates
  - Iconic display
    - Needle icons, Chernoff faces
  - Dense pixel display
    - What we're about to see...
  - Stacked display
    - Treemaps, dimensional stacking

TVCG '02

Fall 2013

CS 7450

29

## Minimum Possible?

- We have data cases with variables
- What's the smallest representation we can use?
  - How?

Fall 2013

CS 7450

30

## Dense Pixel Display

- Represent data case or a variable as a pixel
- Million or more per display
- Seems to rely on use of color
- Can pack lots in
  
- Challenge: What's the layout?

Fall 2013

CS 7450

31

## One Representation

- Grouping arrangement
- One pixel per variable
- Each data case has its own small rectangular icon
- Plot out variables for data point in that icon using a grid or spiral layout

Uses color scale

Fall 2013

CS 7450

32

# Illustration

Levkowitz  
Vis '91

Fall 2013

CS 7450

33

# Related Idea

- Pixel Bar Chart
- Overload typical bar chart with more information about individual elements

Keim et al  
*Information Visualization '02*

Fall 2013

CS 7450

34

# Idea 1

Height encodes quantity

Width encodes quantity

Fall 2013

CS 7450

35

# Idea 2

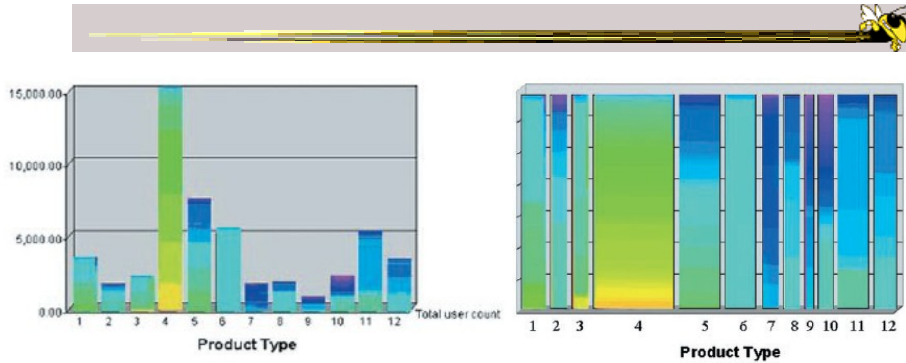

- Make each pixel within a bar correspond to a data point in that group represented by the bar
  - Can do millions that way
- Color the pixel to represent the value of one of the data point's variables

Fall 2013

CS 7450

36

# Idea 3

Each pixel is a customer  
 Color encodes amount spent by that person  
 High-bright, Low-dark  
 Ordered by that color attribute too  
 Right one shows more customers

Fall 2013

CS 7450

37

# Idea 4

Product type is x-axis divider  
 Customers ordered by  
 y-axis: dollar amount  
 x-axis: number of visits  
 Color is (a) dollar amount spent, (b) number of visits, (c) sales quantity

Fall 2013

CS 7450

38

# Idea 5

Figure 7 Dividing attributes on x- and y-axis (e.g.,  $D_x = \text{Product Type}$ ,  $D_y = \text{Region}$ ).

Figure 8 Ordering attributes on x- and y-axis (e.g.,  $O_x = \text{Dollar Amount}$ ,  $O_y = \text{Quantity}$ ).

Can divide on two different attributes on x and y

Order items on both x and y

Figure 9 Multiple coloring attributes (e.g.,  $C_1 = \text{dollar amount}$ ,  $C_2 = \text{no. of visits}$ ,  $C_3 = \text{quantity}$ ,  $C_4 = \text{region}$ ).

Color maps to some attribute  
(Same item always at same x,y position)

# Idea 6

Mapping specified by 5 tuple  $\langle D_{x'}, D_{y'}, O_{x'}, O_{y'}, C \rangle$

- $D_x$  – Attribute partitions x axis
- $D_y$  – Attribute partitions y axis
- $O_x$  – Attribute specifies x ordering
- $O_y$  – Attribute specifies y ordering
- $C$  – Attribute specifies color mapping

# Example Application

Figure 13 Multi-pixel bar chart for mining 405,000 sales transaction records. ( $D_x = \text{Product Type}$ ,  $D_y = \perp$ ,  $O_x = \text{no. of visits}$ ,  $O_y = \text{dollar amount}$ ,  $C$ ). (a) Color: dollar amount. (b) Color: no. of visits. (c) Color: quantity.

1. Product type 7 and product type 10 have the top dollar amount customers (dark colors of bar 7 and 10 in Figure 13a)
2. The dollar amount spent and the number of visits are clearly correlated, especially for product type 4 (linear increase of dark colors at the top of bar 4 in Figure 13b)
3. Product types 4 and 11 have the highest quantities sold (dark colors of bar 4 and 11 in Figure 13c)
4. Clicking on pixel A shows details for that customer

Fall 2013

CS 7450

41

## Thoughts?

- Do you think that would be a helpful exploratory tool?

Fall 2013

CS 7450

42

# High Dimensions

- Those techniques could show lots of data, but not so many dimensions at once
  - Have to pick and choose

Fall 2013

CS 7450

43

# Another Idea

- Use the dense pixel display for showing data and dimensions, but then project into 2D plane to encode more information
- VaR – Value and relation display

Fall 2013

CS 7450

Yang et al  
InfoVis '04

44

# Algorithm

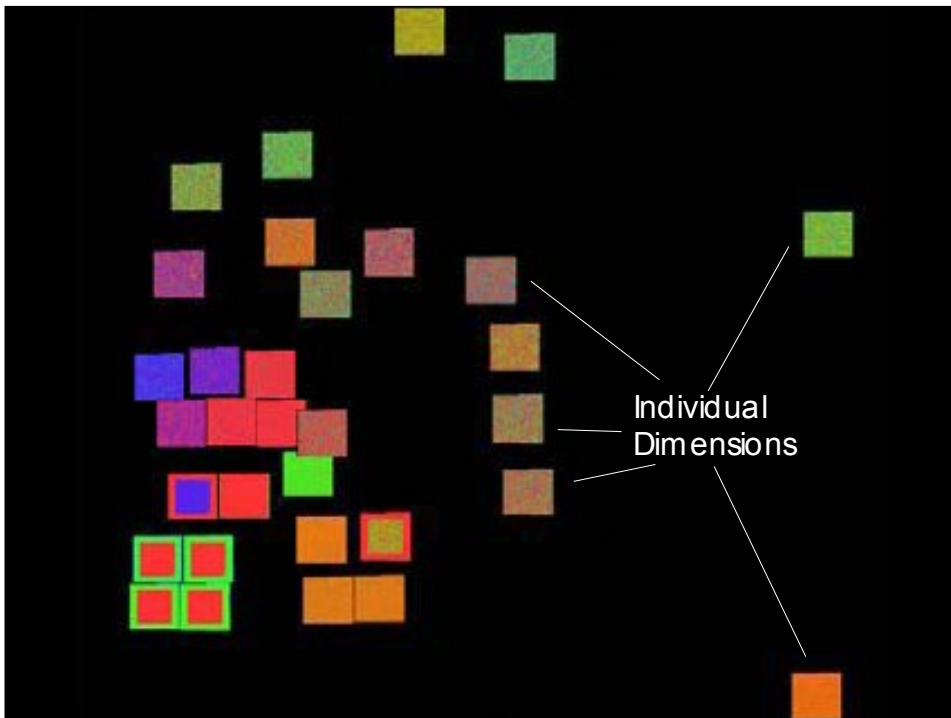

- Find a correlation function for comparing dimensions
- Calculate distances between dimensions (similarities)
- Make each dimension into a dense pixel glyph
- Assign position for each glyph in 2D plane using multi-dimensional scaling

Fall 2013

CS 7450

45

## Questions

- What order are the data cases in each dimension-glyph?
  - Maybe there is a predefined order
  - Choose one dimension as “important” then order data cases by their values in that dimension
    - “Important” one may be the one in which many cases are similar

Fall 2013

CS 7450

47

## Alternative

- Instead of each glyph being a dimension, it can be a data case

Fall 2013

CS 7450

48

# Follow-on Work

- Use alternate positioning strategies other than MDS
- Use Jigsaw map idea (Wattenberg, InfoVis '05) to lay out the dimensions into a grid
  - Removes overlap
  - Limits number that can be plotted

Yang et al  
TVCG '07

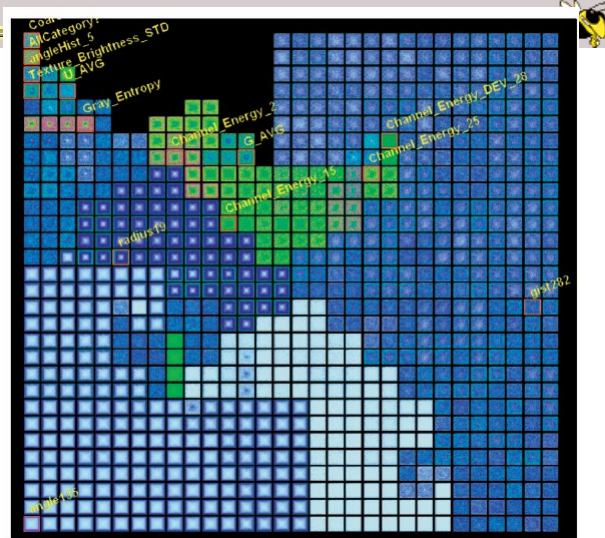

Fall 2013

CS 7450

49

# New Layout

Plot the glyphs  
into the grid  
positions

Fall 2013

CS 7450

50

# HCE

- Hierarchical Clustering Explorer
- Implements “rank by feature” framework
- Help guide user to choose 1D distributions and 2D scatterplots from various dimensions of a data set
- Combine statistical analysis with user-directed exploration

Seo & Shneiderman  
*Information Visualization '05*

Fall 2013

CS 7450

51

# Idea

- Choose a feature detection criterion to rank 1D and 2D projections of a data set
- Use person’s perceptual abilities to pick out interesting items from view

Fall 2013

CS 7450

52

# HCE UI

Some chosen distributions and scatterplots

Cases in columns,  
variables in rows

Group similar cases

Seven tabs at bottom to choose from

Fall 2013

CS 7450

53

## Operation

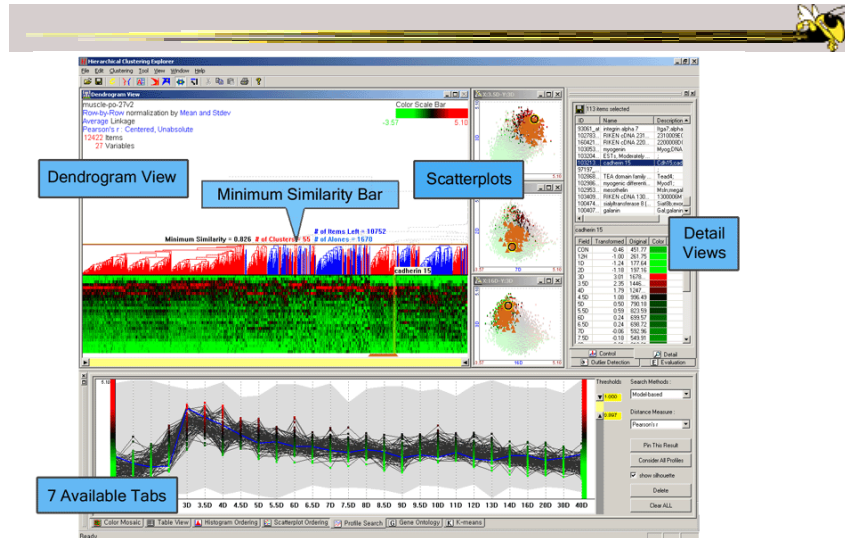

- When you choose the histogram ordering or scatterplot ordering tabs at the bottom left, these give results based on various statistical measures
- You can then choose some of them to visualize

Fall 2013

CS 7450

54

# Demo

Fall 2013

CS 7450

55

# Recap

- We've seen many general techniques for multivariate data these past two days
  - Know strengths and limitations of each
  - Know which ones are good for which circumstances
  - We still haven't explored interaction much

Fall 2013

CS 7450

56

# Project

- Turn in two copies of proposal

Fall 2013
