

Lev Reyzin is a postdoctoral fellow at the Algorithms and Randomness Center at the Georgia Institute of Technology. His research interests span the theory and practice of machine learning. Before coming to Georgia Tech, he spent a year as a scientist at Yahoo! Research working on machine learning problems in computational advertising. After earning a B.S.E. from Princeton University, Lev completed his Ph.D. in 2009 at Yale University; his dissertation work focused on active learning of interaction networks. His work has received awards at ICML, COLT, and AISTATS, as well as an NSF Graduate Fellowship, an NSF Computing Innovation Fellowship, and a Simons Postdoctoral Fellowship.
