

TeamBots and Motor Schemas

CS4630 Project 2

Due Beginning of Class 6 Jan 2002

Tucker Balch

January 30, 2002

1 Installing TeamBots

The first part of this assignment is for you to just get TeamBots up and running on your own machine. Go to <http://www.teambots.org> and follow the links to download the TeamBots software. There is online documentation describing how to install the software. You will need to have the program unzip and you will have to have Java in order to get things working. Once you've got it installed, run one of the demos to make sure it is working.

2 Working With TeamBots

Once you have TeamBots installed complete the following exercises (attached). The exercises are also available online at:
<http://www-2.cs.cmu.edu/~trb/TeamBots/Domains/Book/index.html>.
