CS 2316 – Where it Fits

College of Computing
Georgia Institute of Technology has six Colleges
- College of Architecture
- College of Computing
- College of Engineering
- Ivan Alan College of Liberal Arts
- College of Management
- College of Sciences
College of Computing – That's us!

- Georgia Institute of Technology has six Colleges
  - College of Architecture
  - College of Computing
  - College of Engineering
  - Ivan Alan College of Liberal Arts
  - College of Management
  - College of Sciences
GaTech Computer Science Requirement

• All students at Georgia Tech must complete courses in math, science, humanities, social science, computing, and health & performance science.

• CS 1301 is one of three classes that fulfills the computing requirement.

• The three classes that fulfill the computing requirement are:
  - CS 1301 — Introduction to Computing (robots)
  - CS 1315 — Media Computation
  - CS 1371 — Introduction to Computing(matlab)
Georgia Tech CS 1 Options:

- **CS 1301 – Introduction to Computing**
  - Taught in Python with robots.
  - Taken by ISYE majors (as of 2011).
- **CS 1315 – Media Computation**
  - Taught in Python, students manipulate media (images/sounds).
- **CS 1371 – Introduction to Computing**
  - Taught in MATLAB.
  - Taken by all School of Engineering students except ISYE.
What comes after CS 1301 / 1315 / 1371?

- After completing CS 1, computer science majors typically complete:
  - CS 1331 – Introduction to Object Oriented Programming
  - CS 1332 – Data Structures
CS 2316 – Practical Programming Skills

- 2316 teaches Python programming and data manipulation for industrial and scientific programming.
- It focuses on data manipulation more than 1331.
- 2316 gives more programming practice, and less theory.
CS1331

- CS 1331-Introduction to OOP
  - Taught in Java
  - Introduces Object Oriented Programming
  - Reinforces skills learned in CS1301
- CS 1331 is required by all 8 possible threads in the CS major
- Also a prerequisite for the CS minor.
CS1332

- CS 1332 – Data Structures
  - Taught in Java
  - Teaches data representation and manipulation (advanced data structures).
- CS1332 is required by all but the People thread.
Minor in Computer Science

- CS 1331 (Prerequisite)
- 15-19 semester hours of computer science coursework, 9 of which must be 3000 level or higher.
- Choose one of seven tracks:
  - Devices
  - Information Internetworks
  - Intelligence
  - Media
  - People
  - Platforms
  - Theory
• The College of Computing is currently divided into three schools:
  - School of Computer Science
  - School of Interactive Computing
  - School of Computational Science and Engineering
College of Computing – Undergraduate Degree

- Undergraduate degrees such as the Bachelors of Science (BS) are “owned” by the College of Computing in general, and are not controlled by a School.
- Undergraduate classes are taught by professors from all three schools.
- To receive a bachelors degree in Computer Science, students must complete two “Threads”.
Threads

- A thread is a coordinated path through multiple courses so that the end result for the student is expertise in the area of the thread.
- Threads contain both CS courses as well as courses from outside Computer Science.
- A BS in Computer Science at Georgia Tech is defined as completing any two threads.
List of Threads (1/4)

- **Modeling & Simulation**: Computing for representing the world, as in computational sciences. Examples include weather simulations, protein folding, crash simulations, epidemic modeling, etc.

- **Devices**: Computing meets the physical world, in such areas as robotics and real-time embedded systems such as cell phones.
List of Threads (2/4)

• **Theory**: Fundamentals of computing, such as computer science theory. Examples include Algorithmic complexity, Automata Theory, Computability.

• **Information Internetworking**: Computing for storing, recalling, and communicating information. Includes aspects of databases, searching, and networking.
List of Threads (3/4)

- **Intelligence**: Computing as cognition, its representation and processes. Artificial Intelligence, Machine Learning are examples.

- **Media**: Computing for processing, creating, and presenting multimedia. Video compression, special effects, and image enhancement are examples.
List of Threads (4/4)

• **People:** Computing meets people, including the design of human-centered systems. Examples include user interface design, recommender systems, social networks.

• **Platforms:** Computing across different kinds of hardware, with different characteristics and infrastructures. Computer architecture, operating systems, and programming languages.
Threads related to CS 2316

- CS 2316 is most like the **Information Internetworking** thread.
- This class is a small sample of that thread.
