### Power Architecture zone editors' notebook

This web log is the product of the collaborative, innovative, virtual minds of the editors of the IBM developerWorks [Power Architecture zone](#). It includes, but is not limited to, their ravings on Power Architecture and industry news and events.

Thursday May 24, 2007

#### Clear workshop calendars: 2-day Cell/B.E. seminar in Georgia

**Gettin' down with Cell/B.E. at GA Tech:** June 18-19 in Atlanta, Georgia Tech is holding a no-fee workshop on software and applications for the Cell/B.E. processor -- the workshop will address these topics within a framework that includes such areas as gaming, VR, home entertainment, tools and programmability, and high performance scientific and technical computing. Speakers include Bijan Davari from IBM Research, Dominic Mallinson from SCEI, and Yoshio Masubuchi from Toshiba.

**Cell/B.E. and medical imaging:** You might not want to miss the Workshop on Solving Computational Challenges on Medical Imaging (Seattle, July 23-24; I guess plain old "Medical Imaging Technology 07" was taken) -- among the presentations will be

- IBM Distinguished Engineer Peter Hofstee on "Real-time Computing and the Cell Broadband Engine Processor";
- Shahrokh Daijavad on "Real-time Image Registration on the Cell Broadband Engine Processor";
- Gedae president William Lundgren on "Application of Gedae to Programming the Cell Broadband Engine";
- RapidMind chief scientist Michael McCool on "Writing High Performance Applications for GPUs and the Cell BE" (McCool also has a recent article on the Power Architecture zone, "[Build high-performance apps for multicore processors](#)");
- CodeSourcery CEO Mark Mitchell on "Using a Portable, High-Level API to Program the Cell Broadband Engine."
