Homework Submission Guidelines
CS 4510, Fall 2020

• We reserve the ability to take off reasonable, but arbitrary (possibly > 25) amounts of points for not following homework guidelines.

• Submissions and due date
  – Homeworks should be submitted through GradeScope.
  – Homeworks are due at the same time as start of class (noon) on the assigned due date.
  – Each homework can be submitted up to two days late (still due at noon).
  – You have up to six late days across all six homeworks.
  – If you have already made an initial, non-late submission, and would like to resubmit a late version, please contact the TAs (ideally via a private Piazza post) so that the right version is graded.

• Formatting and typesetting
  – Start the answer to each question on a new page.
  – If you choose to not typeset, please write neat and legibly, and either take a clear photo, or use a scanner.

• Collaboration and use of external sources
  – Collaboration is allowed/encouraged on problems, however each student must independently complete their own write-up, and list all collaborators.
  – No credit will be given to solutions obtained verbatim from the Internet or other sources.

• Presenting solutions
  – Please write succinct and precise answers.
  – For solutions longer than a few sentences, please give a general idea before the details at the very start.
– Try to be formal and mathematically rigorous in your solutions. For most topics in this course, this involves algebraically defining the objects involved in your proof,
