Basic AIBO Programming
CS4631 Project 3
Due in class Tuesday March 30

March 18, 2004

1 Overview

For this project you will be provided software that enables an AIBO to track a pink ball.
You are to reprogram the robot to track another object of a different color.
You can choose whatever object or color you like.

2 Getting the Code

See http://www.cc.gatech.edu/~tucker/courses/irp/AIBO/ for the AIBO tutorial and for links to the code.

3 Deliverables

Write a short description of how you modified the code so that you could track the new object. Append the code to your hand in.
Demonstrate the tracking to your team leader. Ask your team leader to write a short description (one or two sentences) of how well your code works. Have him sign it and staple it to your hand in.
